

CAMPUSFIX

RULES ONLY

Version V1.10.2 · October 2026

Operational rules for safe, fair and responsible use of CampusFix. This document intentionally contains rules only and does not include signatures, approvals or authorization fields.

1. Account Rules

Use only your own CampusFix account. Never share credentials, impersonate another user, or attempt to access another account.

2. Complaint Rules

Submit genuine, accurate and relevant campus maintenance complaints. Use the correct tower, room or area, category and description. Do not knowingly submit false, exaggerated, duplicate or automated complaints.

3. Photo Rules

Photos are optional. Upload only relevant images. Do not upload unnecessary faces, identity documents, personal records, malicious files or material you do not have the right to share.

4. Role & Access Rules

Students may access their own records. Workers may access complaints within their assigned scope. Administrators may perform authorized operational management. Do not attempt to bypass Firebase Authentication or Firestore Security Rules.

5. Privacy Rules

Do not disclose student information, complaint details, room information, photos or other private records outside legitimate CampusFix operations.

6. Security Rules

Do not probe, disable, bypass or interfere with CampusFix security controls. Do not upload malware or attempt unauthorized access, scraping, bulk extraction or deliberate service disruption.

7. Worker Rules

Workers must act only on assigned work, record accurate progress and resolution notes, and avoid accessing or sharing information outside their authorized scope.

8. Administrator Rules

Administrators must manage users, towers, departments, teams and assignments responsibly and use privileged access only for legitimate CampusFix operations.

9. Emergency Rule

CampusFix is not an emergency service. Fires, medical emergencies, security threats and other urgent situations must be reported through the institution's official emergency channels.

10. Enforcement

Violations may result in account suspension, removal of access or other action under the deploying organization's applicable policies and procedures.
