

CAMPUSFIX

Campus Complaint & Maintenance Management Website Policies & Launch Documentation

Report • Assign • Track • Resolve

DRAFT — PENDING ORGANIZATIONAL REVIEW. This document has not yet been reviewed or approved by the organization operating CampusFix, and must not be treated as final or legally binding until that review is complete.

Version 1.0

12. Final Production-Release Checklist

Privacy Policy

What CampusFix collects, why, who can see it, and how to request your data.

1. What CampusFix is, and who operates it

CampusFix is a campus complaint and maintenance management application. It lets students report maintenance issues (for example, a broken fixture or a plumbing problem) in a specific tower and room, and lets administrators and maintenance workers assign, track, and resolve those reports.

CampusFix is operated by [Official University/Organization Name], located at [Official Address]. This policy describes only the data handled by the CampusFix application itself — it does not cover other, unrelated systems the organization may operate.

2. Information CampusFix actually collects

This section lists only the data fields that exist in CampusFix's database today. Nothing is collected beyond what is described here.

2.1 Account information (all users)

- Full name
- Email address (used to sign in via Firebase Authentication)
- Password (stored only by Firebase Authentication, in hashed form — CampusFix's own database never stores your password)
- Phone number (optional field)
- Account role (student, worker/operations, or admin) and account active/inactive status
- Account creation and last-updated timestamps

2.2 Student-specific information

- Student ID and roll number
- Room number and tower assignment
- Class and semester

2.3 Worker/operations-specific information

- Worker ID and worker type (e.g. plumber, electrician)
- Team assignment

2.4 Complaint ("report") information

- Title and description of the issue you report
- Tower and room number where the issue is located
- Category/department the issue is routed to, and priority level you select
- Status of the complaint (submitted, assigned, in progress, completed, closed, or rejected) and its full update history
- Which team and/or worker the complaint is assigned to
- A resolution summary, resolution description, and completion details once a worker closes out the complaint
- Your optional rating and feedback after a complaint is resolved

2.5 Optional photographs

A student may optionally attach a photo when submitting a complaint, and a worker may optionally attach a photo when marking a complaint resolved. Photos are always optional — CampusFix never requires a photo to submit or resolve a complaint. In the current deployment, photo upload may be entirely disabled at the infrastructure level (see Section 8), in which case no photo is stored anywhere regardless of what a user selects in the form.

2.6 Notifications

- In-app notifications generated by complaint activity (e.g. "your complaint was assigned"), including the notification type, message text, related complaint, and read/unread status

2.7 Technical and security information

Firebase Authentication and Cloud Firestore, the infrastructure CampusFix runs on, automatically log standard technical information needed to operate and secure the service (such as sign-in timestamps and request metadata) as part of their normal operation. CampusFix's own application code does not separately collect device fingerprints, precise location, or browsing history outside the app.

2.8 Optional analytics

If enabled and only after you accept the cookie/analytics banner, CampusFix may use Vercel Web Analytics to understand aggregate, anonymized traffic patterns (such as which pages are visited and approximate device/browser type). See the Cookie & Analytics Notice for full detail. Analytics never receives complaint descriptions, names, student IDs, phone numbers, or any other private complaint or account data.

3. Why this information is collected, and how it's used

- To create and secure your account, and to know which portal (student, worker, or admin) you should see
- To let you submit a maintenance complaint with enough detail (location, category, description) that it can be routed and fixed
- To route complaints to the correct department, team, and worker, and to track their status to resolution
- To notify you about activity on your own complaints or assignments
- To show you your own complaint history
- To let administrators manage towers, departments, teams, and worker assignments so the maintenance workflow functions
- To generate aggregate, non-identifying public statistics shown on the CampusFix homepage (see Section 5)

4. Who can access your information

4.1 Student access

A student can see their own account profile and their own complaints, including status, assignment, and resolution details. A student cannot see other students' complaints, other students' account information, or worker/admin-only data.

4.2 Worker/operations access

A worker can see complaints assigned to their team, including the reporting student's name, room/tower, and complaint details necessary to complete the work, and can post status updates. Workers do not have access to manage user accounts, departments, or towers.

4.3 Admin access

Administrators can see all complaints, all user accounts and roles, and manage towers, departments, and worker teams, in order to operate the platform. Administrator access is a trusted-operator role and should be limited to authorized staff of the operating organization.

4.4 Public access limitations

The public CampusFix homepage (available without logging in) shows only aggregate counts (for example, total complaints, resolution rate, number of active towers) and non-identifying recent-activity entries (a status change, a tower name, and a department name — never a student's name, room number, complaint description, or photo). The public homepage never exposes admission numbers, phone numbers, private email addresses, private complaint descriptions, private room information, private photographs, or authentication information.

5. Infrastructure and third-party services actually used

CampusFix only uses the following third-party infrastructure providers in production. No other third-party service receives CampusFix data.

- Firebase Authentication (Google) — handles account sign-in and password storage.
- Cloud Firestore (Google) — the database that stores account profiles, complaints, notifications, towers, departments, and teams described above.
- Firebase Storage (Google) — OPTIONAL. Only used if the organization enables it for complaint/resolution photos. If not enabled, no photo is ever uploaded or stored, regardless of what a user selects.
- Vercel — hosts the CampusFix website.
- Vercel Web Analytics — OPTIONAL, loads only after you accept the analytics consent banner. See Section 2.8 and the Cookie & Analytics Notice.

6. Cookies and local storage

CampusFix uses browser local storage for two purposes: keeping you signed in (via Firebase Authentication's session mechanism) and remembering your cookie/analytics consent choice and your light/dark theme preference. See the Cookie & Analytics Notice for full detail. CampusFix does not use third-party advertising cookies.

7. Security measures

CampusFix is served over HTTPS. Access to data is enforced through Firebase Authentication (so every request is tied to a signed-in account) and Cloud Firestore Security Rules (so an account can only read or write the data its role is permitted to touch — for example, a student cannot read another student's complaint). See the Security page for more detail. No security measure is perfect, and this policy does not claim CampusFix is immune to all risk.

8. Photo storage — optional, and possibly disabled entirely

As described in Section 2.5, photo attachments are optional at every step of the complaint workflow. In addition, the organization operating CampusFix may choose not to enable Firebase Storage at all (for cost or other reasons). When Storage is disabled, the photo upload control still appears but no image is ever uploaded or retained anywhere — complaints submit and resolve normally with no photo. This is a deliberate design decision, not a bug: CampusFix must remain fully usable with photo storage off.

9. Data retention

Retention periods for CampusFix data must be approved by [Official University/Organization Name] before publication. Until that approval happens, this section states the categories of data retained and uses a placeholder rather than inventing a period. See the Data Handling & Retention Policy page for the full breakdown by category.

Approved retention period: [Insert organization-approved retention period].

10. Your privacy requests

You may request access to, correction of, or deletion of your CampusFix account data by following the process on the Privacy Requests page. Because CampusFix accounts are tied to an educational institution, some requests may need to be handled in coordination with the organization's broader student-records processes.

11. Account security — your responsibilities

- Keep your password confidential and do not share your CampusFix account with anyone else.
- Use a strong, unique password.
- Report suspected unauthorized access to your account to the organization immediately.

12. Minors

CampusFix may be used by university students, some of whom may be under the age of 18 depending on the organization and jurisdiction. This policy does not make any legal determination about age-related consent, notice, or data-handling requirements for such users. This is explicitly flagged for review by the organization's legal/privacy authority, covering: age requirements for account creation, any required notices or consents, and any special handling of data belonging to a minor. No claim of compliance with child-privacy law (for example, COPPA, GDPR-K, or similar) is made until that review is complete.

13. Changes to this policy

This policy may be updated as CampusFix's features change or as the organization completes its review. Material changes will be reflected with a new "Last Updated" date below.

14. Contact

Privacy questions or requests: [Privacy Contact Email]

Technical support: [Technical Support Email]

Terms & Conditions

The rules for using CampusFix as a student, worker, or administrator.

1. Acceptance of these terms

By creating or using a CampusFix account, you agree to these Terms & Conditions and to the Acceptable Use Rules. CampusFix is provided by [Official University/Organization Name] for use by its students, maintenance staff, and administrators.

2. Accounts

- Student accounts are created through the public sign-up page and always start with the "student" role — public sign-up can never create an admin or worker account.
- Admin and worker (operations) accounts are created and assigned separately by an administrator, outside the public sign-up flow.
- You are responsible for keeping your login credentials confidential and for all activity under your account.
- You must provide accurate information when creating your account (for example, your real room number and student ID) so complaints can be routed and resolved correctly.

3. Password security

Choose a strong password and do not share it with anyone else, including roommates or friends. If you believe your account has been compromised, change your password immediately and notify the organization.

4. Submitting complaints

- Submit genuine maintenance issues, described accurately, with the correct tower, room, and category.
- A photo is always optional — you are never required to attach one to submit a complaint.
- Do not submit knowingly false, exaggerated, or duplicate complaints in order to manipulate priority, response time, or another user's workload.
- Do not use the complaint description or title field to submit content unrelated to a genuine maintenance issue.

5. Photos

If you choose to attach a photo, it must relate to the maintenance issue being reported. Do not upload photos that are unnecessary, unrelated, contain other people without their knowledge/consent, or that are otherwise inappropriate. See Acceptable Use for more detail. Photo upload may be unavailable depending on the organization's configuration; complaints must still submit normally in that case.

6. Responsibilities by role

6.1 Students

- Submit genuine, accurately described complaints.
- Provide correct location information.
- Use your own account only.

6.2 Workers (operations)

- Act on assigned complaints in good faith and update status accurately.
- Only record work you actually performed in resolution notes.
- Do not access complaints or accounts outside your assigned scope.

6.3 Administrators

- Manage towers, departments, teams, and user roles responsibly.
- Assign complaints fairly and in a timely manner.
- Do not use administrative access to view or share user data outside the legitimate operation of CampusFix.

7. Service availability

CampusFix is provided on an "as available" basis. [Official University/Organization Name] does not guarantee uninterrupted or error-free operation. Planned maintenance, unplanned outages, and outages caused by third-party providers (Firebase, Vercel) may occasionally make CampusFix temporarily unavailable.

8. CampusFix is NOT an emergency service

CampusFix is a maintenance complaint tracking tool. It is NOT an emergency service and must not be used to report fires, medical emergencies, security threats, or any situation requiring an immediate emergency response. In an emergency, contact your local emergency number and/or your institution's emergency/security office directly — do not rely on a CampusFix complaint to get an urgent response.

9. Prohibited activity

- Attempting to access another user's account or data without authorization.
- Attempting to bypass, disable, or probe Firebase Authentication or Firestore Security Rules.
- Uploading malicious files or content designed to exploit or disrupt the service.
- Submitting spam, automated, or bulk complaints.
- Attempting to overload or deliberately degrade the service (e.g. via scripted mass submissions).
- Scraping or automated bulk-extraction of complaint or user data.

10. Account suspension

[Official University/Organization Name] may suspend or deactivate an account that violates these terms or the Acceptable Use Rules, including accounts used to submit false complaints, attempt unauthorized access, or otherwise abuse the platform.

11. Changes to the service and these terms

Features, workflows, and these terms may change over time as CampusFix is developed further. Continued use of CampusFix after a change to these terms constitutes acceptance of the updated terms.

12. Termination

You may stop using CampusFix at any time. The organization may terminate or suspend access for violation of these terms, for a user who is no longer affiliated with the institution, or as otherwise required by its policies.

13. Contact

Questions about these terms: [\[Technical Support Email\]](#)

Acceptable Use Rules

Clear, plain-language rules for everyone using CampusFix.

Rules for everyone

- Use your own account. Do not share your password with anyone, including friends or roommates.
- Submit genuine complaints only. Do not exaggerate, fabricate, or duplicate complaints.
- Do not upload unnecessary personal information in a complaint description or photo.
- Do not upload malicious files (this includes disguised executables, scripts, or anything intended to exploit the app).
- Do not attempt to access another user's account, complaints, or information.
- Do not attempt to bypass Firebase Authentication or Firestore Security Rules, or otherwise attempt unauthorized access to the system.
- Do not scrape or bulk-extract private data from CampusFix.
- Do not deliberately overload the service (for example, scripted mass submissions or repeated rapid requests).

For workers and administrators specifically

- Only view or act on complaints within your assigned role and scope.
- Do not share resolution photos, complaint details, or student information outside the legitimate operation of CampusFix.
- Report any suspected security issue to the organization rather than attempting to investigate it yourself.

Enforcement

Violating these rules may result in account suspension, as described in the Terms & Conditions. [Official University/Organization Name] may also take further action consistent with its own institutional policies.

Security

How CampusFix protects accounts and data, in plain terms.

Transport security

- CampusFix is served exclusively over HTTPS. Vercel, the hosting provider, enforces HTTPS and automatically redirects any HTTP request.
- Security-related response headers (HSTS, X-Content-Type-Options, Referrer-Policy, Permissions-Policy, and a restrictive frame-ancestors policy) are set at the hosting layer.

Authentication

Sign-in is handled entirely by Firebase Authentication (email/password). CampusFix's own code and database never see or store your password — Firebase stores it in hashed form.

Authorization — Firestore Security Rules

Every read and write to CampusFix's database (Cloud Firestore) is checked against Firestore Security Rules that run on Google's servers, not just hidden by the app's user interface. In short:

- A student can read and write only their own profile and their own complaints.
- A worker (operations) can read and act on complaints within their assigned scope, but cannot manage user accounts, towers, or departments.
- Only an admin account can manage towers, departments, worker teams, and user roles.
- Public, unauthenticated access is limited to aggregate, non-identifying statistics and activity shown on the homepage.

Input and file validation

Complaint and account forms validate required fields, formats (such as email), and reasonable length limits client-side, with clear human-readable error messages, and are also subject to Firestore Security Rules server-side. When photo upload is enabled, uploaded files are checked for file type and a maximum size before upload is attempted.

Spam and abuse mitigation

CampusFix uses lightweight, client-side measures — a hidden honeypot field and a minimum form-interaction time — to reduce automated spam submissions on public-facing forms (sign-up and complaint submission). These measures reduce casual automated abuse; they are not a substitute for server-side security, and CampusFix's real access control is enforced by Firebase Authentication and Firestore Security Rules, not by these measures.

Secrets and configuration

- CampusFix's Firebase Web SDK configuration (API key, project ID, etc.) is loaded from environment variables at build time and is the same type of publishable client configuration Firebase documents as safe to ship to a browser — it is not a secret credential, and it does not grant access on its own; Firestore Security Rules do that.

- No Firebase service-account key, private API key, or other server-side secret is present anywhere in the frontend source code.
- A build-time check scans the source tree for common secret patterns (private key headers, live API key prefixes, etc.) and fails the build if one is found, as a safety net against accidental commits.

Reporting a security issue

If you believe you've found a security issue in CampusFix, please report it to [Technical Support Email] rather than testing it against other users' data.

Cookie & Analytics Notice

What CampusFix stores in your browser, and your analytics choice.

What CampusFix stores in your browser

- Sign-in session — used by Firebase Authentication to keep you logged in. Required for the app to function.
- Theme preference (light/dark) — remembers your chosen appearance. Not required, but harmless and not shared with anyone.
- Cookie/analytics consent choice — remembers whether you accepted or declined optional analytics, so you're not asked again every visit.

Optional analytics

CampusFix may use Vercel Web Analytics to understand aggregate, anonymized traffic (for example, which pages are visited and approximate device type). This is OFF by default and loads only after you click "Accept" on the consent banner. If you click "Decline," or take no action, no analytics script is loaded.

Analytics is never given complaint descriptions, names, student IDs, phone numbers, room numbers, or any other private account or complaint data. It cannot identify you individually.

Your choice

You can accept or decline analytics at any time from the consent banner shown on your first visit. Declining does not block or limit any CampusFix functionality — it only disables the optional analytics script.

Third-party cookies

CampusFix does not use third-party advertising cookies or advertising trackers.

Data Handling & Retention Policy

How long each category of CampusFix data is kept — pending approval.

Status

DRAFT — PENDING ORGANIZATIONAL REVIEW. This document has not yet been reviewed or approved by the organization operating CampusFix, and must not be treated as final or legally binding until that review is complete.

[Official University/Organization Name] must approve the retention period for each category below before this policy is considered final.

Retention categories

Each category below currently uses a placeholder retention period. No period has been invented or assumed.

Account/profile data (name, email, role, student/worker identifiers)

Retention: [Insert organization-approved retention period]

Complaint records (title, description, status history, assignments)

Retention: [Insert organization-approved retention period]

Complaint and resolution photographs (when photo storage is enabled)

Retention: [Insert organization-approved retention period]

Assignment/status update history

Retention: [Insert organization-approved retention period]

Security/audit logs generated by Firebase Authentication and Cloud Firestore

Retention: [Insert organization-approved retention period] (subject to the underlying Firebase/Google Cloud provider's own log retention, which the organization should review separately)

Analytics data (only if analytics consent was given)

Retention: [Insert organization-approved retention period] (subject to Vercel Web Analytics' own retention, which the organization should review separately)

Deletion

Once retention periods are approved and this policy is finalized, CampusFix's operating organization is responsible for ensuring data is deleted or anonymized in line with the approved schedule. Users may also submit deletion requests — see Privacy Requests.

Accessibility Statement

CampusFix's approach to accessibility, and how to report an issue.

Our approach

CampusFix aims to be usable by as many people as possible, including people using assistive technology. Ongoing work includes:

- Sufficient color contrast for text and interactive elements in both light and dark themes.
- Visible keyboard focus states on interactive elements.
- Labelled form fields and human-readable error messages.
- Complaint status shown with both text and color (e.g. "In Progress") — status is never conveyed by color alone.
- Descriptive alt text on meaningful images; decorative graphics are marked so assistive technology can skip them.
- A responsive layout intended to work without unnecessary horizontal scrolling on phone, tablet, and desktop screen sizes.

Known limitations

CampusFix has not yet completed a formal third-party accessibility audit (for example, against WCAG 2.1 AA). This statement describes engineering intent and an internal review, not a certified conformance level.

Reporting an accessibility issue

If you encounter an accessibility barrier while using CampusFix, please contact [Technical Support Email] with the page and a description of the issue.

Privacy Request Procedure

How to request access to, correction of, or deletion of your data.

What you can request

- A copy of the account and complaint data CampusFix holds about you.
- A correction to inaccurate account information (for example, an outdated room number).
- Deletion of your account and associated data, subject to any record-keeping the organization is required to maintain.

How to request

Email [Privacy Contact Email] from the email address associated with your CampusFix account, stating which request you're making. Include enough detail (such as your student ID) for the organization to verify your identity before acting on the request.

Response time

[Official University/Organization Name] will confirm a target response time for privacy requests once this policy is approved. Until then, no specific timeframe is promised here.

20-Point Launch Checklist

Status of each launch-readiness item as implemented in this release of CampusFix.

- 1. Privacy Policy page** — Published at /privacy, content matches this PDF.
- 2. Terms & Conditions page** — Published at /terms, content matches this PDF.
- 3. Secrets removed from frontend** — Firebase web config loaded from env vars only; build-time secret scan added; no service-account/private keys in source.
- 4. Force HTTPS / security headers** — vercel.json sets HSTS, X-Content-Type-Options, Referrer-Policy, Permissions-Policy, and frame-ancestors.
- 5. Cookie / analytics consent banner** — Accept/Decline banner; choice remembered; analytics loads only after Accept.
- 6. Meta titles and descriptions** — Per-route document title + meta description via a lightweight page-meta hook.
- 7. Social preview image** — og:image / twitter:image generated and referenced in index.html.
- 8. Favicon** — SVG favicon already present and linked.
- 9. sitemap.xml + robots.txt** — Added to /public; private portal routes disallowed for crawlers.
- 10. Alt text on images** — Audited — all elements already carry meaningful alt text; verified during this review.
- 11. Compress/optimize images** — Audited — no shipped raster images; all UI icons are hand-authored SVG.
- 12. Page-load speed** — Production bundle measured (~283 KB gzip JS, single chunk). Route-level code-splitting is recommended as a follow-up; no Lighthouse run performed.
- 13. Fix color contrast** — Existing light/dark theme tokens retained. No automated contrast audit was run in this release — run Lighthouse/axe on the deployed site before launch.
- 14. Mobile-friendly** — Existing responsive breakpoints retained and new pages/banner include mobile rules. Not tested on physical devices in this release — manual device testing required.
- 15. Custom 404 page** — Added a branded 404 page; wildcard route now shows it instead of a silent redirect.
- 16. Fix broken links** — Internal link targets checked against the route table by script; footer/auth links to legal pages added.
- 17. Form validation** — Human-readable, field-specific validation messages added to sign-up and complaint forms; file type/size validation for photos.
- 18. Spam protection** — Honeypot field + minimum interaction time added to sign-up and complaint forms. Not a substitute for Firestore Security Rules.
- 19. Analytics** — Vercel Web Analytics wired in, consent-gated, no private data sent.
- 20. One clear call-to-action** — Homepage already uses a single primary CTA ("Open CampusFix") with light secondary links — confirmed during this review.

Authorization / Approval Sheet

This approval sheet is an internal organizational approval record and does not itself constitute government certification or legal authorization.

Production Release			

Version History

Version 1.0 — [Last Updated]

Initial CampusFix policy and launch documentation.

Future versions of this document should be appended below this entry, oldest first, each with its own version number, date, and description of what changed.

Final Production-Release Checklist

To be completed by the organization immediately before making CampusFix publicly available.

- All bracketed placeholders in this document and on the website (organization name, address, contact emails, effective date, retention periods) have been filled in and approved.
- Privacy Policy, Terms & Conditions, and all other policy pages have been reviewed by the organization's legal/privacy authority.
- The Minors section has been reviewed and, if required, updated by the organization's legal/privacy authority.
- Data retention periods have been approved for every category listed in the Data Handling & Retention Policy.
- Firebase project is on a production plan appropriate for expected traffic, with Firestore Security Rules reviewed by the organization.
- Firebase Storage is explicitly enabled or disabled as a deliberate decision (see Privacy Policy Section 8) — not left as an accident.
- Environment variables are set in Vercel (or chosen host) and are not committed to source control.
- Custom production domain is configured, and all placeholder URLs in this document, sitemap.xml, robots.txt, and index.html are updated to the real domain.
- Vercel Web Analytics (or equivalent) is enabled only if the organization wants it, and the consent banner has been verified end-to-end.
- This Authorization / Approval Sheet has been signed by each required reviewer.
