

CAMPUSFIX

20-Point Website Launch Master Pack

Checklist + implementation requirements + a ready-to-paste Claude prompt. Built around the 20 points shown in the supplied reference image.

The 20 points

#	Requirement	What Claude should implement
1	Privacy policy page	Create a clear /privacy page explaining account data, complaint data, optional photos, role-based access, retention/administration and analytics choices. Mark it as a project notice for university review.
2	Terms & conditions page	Create /terms covering legitimate use, account responsibility, complaint content, service availability, administration and emergency/safety limitations.
3	Secrets off the frontend	Keep private credentials and service-account keys out of React. Use only client-safe Firebase configuration and environment variables where appropriate. Add a build-time scan for common secret names.
4	Force HTTPS	Use Vercel's HTTPS deployment and security headers including HSTS. Never design a production flow that depends on plain HTTP.
5	Cookie consent banner	Show a small, understandable analytics/privacy choice. Remember the choice and only load optional analytics after the user accepts.
6	Meta titles + descriptions	Add useful page metadata, theme color, Open Graph and Twitter metadata so links have a proper title and description.
7	Social preview image	Add a professional CampusFix Open Graph/Twitter image and wire it into index.html.
8	Favicon	Provide a clean CampusFix favicon and verify it loads correctly.
9	Sitemap + robots.txt	Create sitemap.xml for public pages and robots.txt that does not advertise private student/admin/worker routes.
10	Alt text on images	Give meaningful images useful alt text and treat decorative graphics as decorative.
11	Compress your images	Keep shipped assets small and optimized. Prefer SVG/WebP/AVIF where practical and avoid huge screenshots.
12	Check page load speed	Keep the public entry lightweight, lazy-load non-critical content and avoid blocking third-party resources.
13	Fix color contrast	Audit text/background contrast, focus states and status indicators. Never make color the only way to understand a complaint state.
14	Make it mobile-friendly	Make the homepage, login, complaint form and dashboards usable on phone widths without horizontal scrolling.
15	Custom 404 page	Add a useful 404 page with a clear route back to CampusFix.
16	Fix broken links	Verify navigation, footer, authentication, legal and internal application routes.
17	Form validation	Validate required fields, sensible text lengths, email/password formats, file type/size and useful error messages.
18	Spam protection	Add lightweight abuse protection such as a honeypot and minimum interaction time. Treat it as an extra layer, not a replacement for server-side rules.
19	Set up analytics	Support Vercel Web Analytics only after the user accepts optional analytics. Never send complaint text, student names, admission numbers or other sensitive complaint data.
20	One clear call to action	Give the public homepage one obvious primary action such as 'Open CampusFix'; keep secondary actions quieter.

Master Prompt for Claude

Paste this after giving Claude the current CampusFix source ZIP or repository. It is deliberately strict about preserving the working Firebase application.

You are the senior developer responsible for finishing my EXISTING CampusFix project.

DO NOT rebuild the application from scratch.
DO NOT replace Firebase/Firestore/authentication with mock data.
DO NOT remove existing Student, Admin or Worker functionality.
First inspect the source tree and understand the current implementation.

PROJECT:

CampusFix – a campus complaint and maintenance management system using React + Vite + TypeScript + Firebase + Firestore + Vercel.

CURRENT ROLES:

- Student
- Admin
- Worker / Operations

NON-NEGOTIABLE:

- Preserve existing authentication and role protection.
- Preserve Firestore collections and security rules unless a change is demonstrably required.
- Student complaint PHOTO MUST REMAIN OPTIONAL.
- A complaint must submit successfully without a photo.
- Never place service-account credentials or private AI API keys in frontend code.
- Never invent live metrics or fake backend results.
- Do not weaken security to make a feature work.
- Keep the design human, practical and believable. Avoid excessive neon, gradients, glowing cards, fake AI marketing language and unnecessary animation.

IMPLEMENT ALL 20:

1. Privacy Policy page at /privacy.
2. Terms & Conditions page at /terms.
3. Frontend secret scan/build check.
4. HTTPS/security headers suitable for Vercel.
5. Analytics/privacy consent banner. Optional analytics must load ONLY after acceptance.
6. Useful title, meta description, theme color, Open Graph and Twitter metadata.
7. Professional CampusFix social preview image.
8. CampusFix favicon.
9. Public sitemap.xml and robots.txt. Do not advertise private portal routes.
10. Meaningful alt text for images; decorative graphics must be marked decorative.
11. Optimize/compress shipped images.
12. Improve page-load performance and avoid blocking third-party resources.
13. Audit contrast, keyboard focus and status readability.
14. Make homepage, authentication, complaint form and dashboards mobile-friendly.
15. Custom 404 page.
16. Check and fix broken internal/footer/auth/legal links.
17. Strong form validation with useful human-readable errors.
18. Lightweight complaint abuse protection such as honeypot + minimum interaction time. Explain that it is not a replacement for server-side security.
19. Vercel Web Analytics support, loaded only after analytics consent. Never send complaint descriptions, student names, admission numbers or other sensitive complaint data to analytics.
20. One clear primary CTA on the public homepage, such as "Open CampusFix".

COMPLAINT FORM:

- Room number required.
- Issue category required.
- Title required.
- Description required.
- Priority available.
- Photo OPTIONAL.
- If Firebase Storage is disabled, submission must still work.
- Do not make photo upload compulsory.

HUMAN UI:

Use normal university software language:

Complaints, Workers, Departments, Towers, Assignments, Notifications, Settings, Raise Complaint, Track Complaint.

Avoid repeating:

"AI-powered", "revolutionary", "next-generation", "intelligent ecosystem", "AI command center".

Make it look like a product that a real campus would actually use.

TEST:

```
npm install
npm run lint
npm run check:links
npm run build
npm run dev
```

Test:

- Public homepage
- Login
- Signup
- Forgot password
- Student complaint with NO photo
- Student complaint with optional photo
- Admin dashboard
- Admin worker creation
- Admin assignment
- Worker dashboard
- Worker status update
- Notifications
- Privacy
- Terms
- 404
- Mobile layout
- Dark/light theme if already present

Do not claim a test passed unless you actually ran it.

DELIVER:

1. Updated project source
2. A README section documenting all 20 changes
3. Exact commands to run/build
4. Exact deployment steps for anything that needs Vercel/Firebase console configuration
5. A short final QA report showing what was actually tested and what still needs manual testing.

CampusFix QA checklist

Run this before pushing to GitHub and redeploying Vercel.

Area	Check
Build	npm install → npm run build
Lint	npm run lint
Routes	npm run check:links
Student	Submit a complaint with no photo
Photo	Submit with an optional image when storage is enabled
Admin	Create worker and assign a complaint
Worker	Open assigned complaint and update status
Security	Confirm no secrets are committed and Firestore rules remain deployed
SEO	Check title, description, OG image, favicon, sitemap and robots
Privacy	Decline analytics and verify the analytics script is not loaded
Analytics	Accept analytics and verify the Vercel script loads
Mobile	Test phone width for public page, login, form and portals
404	Open a random invalid route and verify the custom 404

Important: Privacy Policy and Terms are project templates. The deploying university/organization should review them before treating them as final legal documents.
